

CNGA3: reconstructed indel and pseudogenizing events

44 events on 38 branches; 17 shared; 110 tips; 2052 alignment columns; 4 with an exact parsimony tie; red X at tip = no ATG start codon (1)
Event labels: alignment start position above the branch, event length below.

Event marker

- Pseudogenizing substitution (premature stop)
- Frameshift insertion
- Frameshift deletion
- Ambiguous disabling candidate (uncertain origin/direction)
- Premature stop lost (reversion)
- Terminal indel (incompleteness, not disabling)
- Shared in-frame insertion (ancestral, non-disrupting)
- Shared in-frame deletion (ancestral, non-disrupting)
- Other event (e.g. lineage-specific in-frame indel)

Pseudogenization history

- Confirmed disabling event
- Inherited pseudogenic history
- Incomplete; no pseudogenization evidence
- Uncertain; no confirmed event
- No inferred disabling history
